

Std 4 Plate DOUBLE ELLIPSE Tank Assembly

*7 Large Ellipse Plate A

*8 Small Ellipse Plate B

Step1:

Step 2:

Step 3:

Step4:

Step 1&2:

Lay a Large Ellipse Plate "A" on a flat surface and insert 4 Small Ellipse plates "B" in slot 1/3/5/7 such that they all are equidistant. Make sure all small plugs are on top. Align a Large Ellipse Plate "A" and lock it on top. Flip the Tank Module 90 degree on its side; make sure you see all Large Plugs aligned, then position the Large Ellipse Plate "A" and lock it in with a light rubber mullet. Repeat the same procedure for other side. This gives a complete Single Module as shown in Step 2.

Step 3 & 4:

Repeat Step 1 to make the Second Module without using 1 Large Plate "A" for the Base and clip the Second Tank Module in position on top of the complete Single Module and lock it in with a light rubber mullet. Such that the Large Plate acts as a common plate. This give you a Double Module(400mm x 715mm x 860mm)

Important Note: Please note when assembled module are placed in the excavation, 715mm & 400mm can be the length or width, visa versa. **860mm always has to be the height.** This way you will always see a complete top ellipse LARGE plate, and no frames.
